

Business Problem Statement

A leading telecom company wants to understand why customers are leaving and identify the key factors driving customer churn. The company aims to use customer data to improve retention, increase customer satisfaction, and reduce churn.

You are tasked with analyzing the company's consumer Telecom dataset to answer the following overarching business question:

"How can customer data be used to identify churn patterns and improve customer retention strategies?"

Deliverables

1. **Data Cleaning & Preparation (Python):** Clean, transform, and prepare the telecom customer churn dataset using Pandas and NumPy.
2. **Exploratory Data Analysis (Python):** Analyze customer demographics, contract types, tenure, services, charges, and churn patterns using Pandas, Matplotlib, and Seaborn.
3. **Visualization & Insights (Python):** Create meaningful visualizations to identify key churn drivers, high-risk customer segments, and customer behavior trends.
4. **Business Insights & Recommendations:** Summarize the key findings and provide actionable recommendations to reduce customer churn and improve retention.
5. **GitHub Repository:** Include the Python EDA notebook/script, dataset, visualizations, and project documentation in a well-structured repository.
